

# Use Less Energy at Home

We're all looking for ways to save, and cutting your energy use is a great way to make an impact on your monthly utility costs. So how do you get started?

Try these simple ways to use less energy at home.

## Swap Out Your Light Bulbs

Did you know that LEDs use up to **90% less energy** than traditional bulbs? Invest in some LEDs and swap out all your old lights. They'll last longer, look brighter, and save energy.

## Identify and Seal Air Leaks

You spend a lot of energy keeping your home climate controlled, and you don't want all that perfect-temperature air to escape through air leaks. Finding and sealing these leaks leads to a temperature-controlled environment without wasting all that energy.

## Be Conscious of Energy Use

Being mindful of your energy consumption is a great place to start. Leaving a room? Turn off the lights! Going out of town? Unplug your devices. Open up those shades to let in some natural light. There are plenty of ways to reduce your usage every day — just take some time to stop and think before you touch that light switch!

## Upgrade Your Thermostat

A programmable thermostat can help you automatically adjust the temperature in your home based on your schedule, so you're not using unnecessary energy when you're away from home or sleeping.

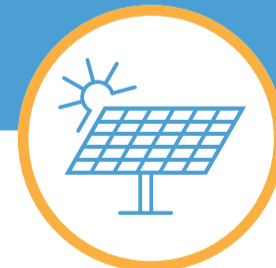

## Upgrade Your Appliances

Outdated fridges, washers and dryers, and dishwashers use a lot of energy. Investing in efficient upgrades can help reduce your energy usage (and your utility costs) long-term.

## Get a Home Energy Audit

Not sure where to begin? An energy professional will conduct a thorough audit of your home to determine what fixes and upgrades you can make to use less energy and spend less on your utility costs! PosiGen provides a no-cost home energy audit to all of our solar customers! It's a win-win!

## Go Solar

Consider going solar! While homes that run on solar don't necessarily use less energy, they generate their own power. That means less reliance on the grid — and lower monthly costs.

## Ready to Get Started?

There's no better time to improve your home's energy consumption! If you're ready to use less energy and help the environment (while reducing your monthly costs), PosiGen is here to help. **Let's get started with a free solar consultation.**
